SCE Initial comments on PRR 1321

Submitted by: Aditya Chauhan, aditya.chauhan@sce.com

SCE recommends a change and asks a question[1]

Recommended change (in ***red*** ***font): Section "Real Time Reports", Page 3***:

Real-Time Unit Commitment (RTUC) Advisory Schedules	Reports the 15-minute interval based resource level advisory energy schedules from the real-time 15-minute market horizon. "Ramp Up" and "Ramp Down" in product types, and "Cleared" and "Market" schedule type attributes related to flexible ramping product. Both Cleared and Market will result to equal values as the flexible ramping product can't be self-scheduled. For VER Resources using the CAISO forecast, the advisory energy schedule is the persistent forecast plus any advisory market dispatch. **Note: Data retention for this report will be a rolling period of five (5) trading days plus the current date. For PDR Resources using the hourly block option, this will display the Binding schedule (even though the report is labeled as Advisory).

SCE appreciates the CAISO noting, in section 10.1.1 on page 12, that,

"Scheduling Coordinators for Proxy Demand Resources using the hourly block option can see their binding schedules via this report (even though the report is labeled as advisory.)"

However, for sake of consistency, to avoid any potential omission and confusion, and given that these relevant sets of information are spread apart on the document, SCE recommends the red fonted change, above.

Question on proposed changes in Section 11.1:

"For Proxy Demand Resources using the hourly block option, please refer to section 4.3.1 for information on obtaining binding dispatches.

…

For Proxy Demand Resources using the 15-minute interval option, please refer to section 4.3.1 for information on obtaining binding dispatches."

Two sentences refer to section 4.3.1 that does not exist on the BPM[2]. SCE requests the CAISO to clarify.
